

# EPS-1 Guidemaster Switch

## Technical Bulletin

Hannay Reels announced this month that beginning in February 2001, they will be switching back to the **EPS-1 style explosion-proof switch** supplied on Guidemasters. Hannay Reels last used this switch in the mid 1990's. The EPS-1 switch is back by popular demand and replaces the current EPS-3 (plastic) switch.

The advantages of the EPS-1 switch include an aluminum housing as well as the ability to replace the internal switch without replacing the housing. There is one significant difference between the EPS-1 switch used years ago, and the new EPS-1 switch that is now available. The new EPS-1 has a larger OD near its base that MATCHES the diameter of the EPS-3. When ordering your Hannay Reel parts, please note these item numbers.

**9917.0200** – EPS-1 switch

**0017.0203** – EPS-3 switch (limited avail)

**9917.0205**– GM-600 switch mtg cylindrical bracket; mounts EPS-1 switches in older GM-600 Guidemasters with smaller bolt pattern

If a customer has a Guidemaster (GM-600) and needs to replace the switch, most likely Lin's will need to send the customer a new cylindrical bracket (9917.0205) as well. The older brackets on these GM-600's have too small an ID to accept the new EPS-1 switch.

If you have any questions regarding your **Hannay Reel** or **Guidemaster parts**, call Lin's Propane Trucks. **Lin's stocks replacement parts and services Hannay hose reels.**
